- 2) EntityFrameworkCore 7.0.3
- 3) Angular 15
- 4) Angular Material 15

Notes

Admin role user: Username: admin, Password: @Open1234

Employee role user: Username: user1, Password: @mahi1234

- 1) Open the Asp.NetCoreWebApi, and run the Package Manager Console and Hit the Command (update-database -context AppDbContext) all databases and schema will be created and populated with sample data. If the project has no migration, please migration first (Add-migration InitialCreate -c AppDbContext -o "Migrations/EmployeeDb")
- 2) HostedServices take care of above task.
